***Claims Allowed***

Claims 8-13 entered 15 May 2008 are allowed. Claims 1-7 withdrawn by Election/Restriction are canceled by this Examiner's Amendment.

***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance:

The field of invention relates to a method of permitting a user to interact with multilingual vendor sites via an online shopping system.

Regarding claim 8: Without designating a language or country, a user submits a product keyword request in the user's native language (or preferred language) via a wireless handheld device to a remote sever that manages an offline database of vendor sites. The remote server extracts price and product information from vendor sites identified in the offline vendor database (via search form URL of each vendor's site) in the native language of the user's keyword query without translation of the keywords or documents and communicates the requested information to the user in the user's native language. Neither the previously cited prior art nor closest prior art noted below alone or in combination with other prior art teach and suggest the combinations of methods as claimed.

**Closest US Patent/Patent Publication Prior Art**

Brown (US 7,260,570) discloses a search method that relates to full text searching and cataloging of keywords in documents in databases, using query terms where the user identifies the language of the query term. Documents in a

Art Unit: 3625

database are first scanned using a crawler, which identifies the presence of keywords in the documents and ranks the frequency of occurrence of the keywords in such documents by way of an extended index table. This previously prepared "extended index table" is then interrogated by a user who provides query terms and indicates the language in which the query terms are provided. The result includes an identification and ranking of documents in which the query terms appear. From a user's perspective, Brown involves the querying of the "extended index table" using query terms provided by the user, where the user identifies the language of the query term, and with only a list identifying and ranking documents being returned by the system. It is left to the user to obtain and otherwise process particular documents of interest as identified from such list.

Brown fails to disclose or teach and suggest a method for real-time online searching of vendors sites over interconnected computer networks using vendor search URLs in the native language of a received product keyword request, and in which the received keyword request is processed in the received native language using vendor descriptions to identify vendor sites in the received native language to be searched. Brown fails to disclose or teach and suggest a search of vendor sites on interconnected computer networks, based upon the native language in which a product keyword request is received using a search form URL of each vendor site, and in which real-time price and product information are extracted from the searched vendor sites and communicated to the user. It is

Art Unit: 3625

further noted that that in there is no a requirement that the language of the request be identified by the user (i.e. explicitly or by country designation).

Neither the previously cited prior art nor closest prior art Brown alone or in combination with other prior art teach and suggest the combinations of methods as claimed. Forward and backward citations of Brown failed to produce prior art that alone or in combination with previously cited prior art or closest prior art Brown teach and suggest the methods as claimed.

#### Closest Non-patent Literature

AltaVista (Paper #20071105) teaches a website search engine but requires the user to specifically select the language using a dropdown box in addition to providing the request itself. AltaVista alone or in combination with supporting NPL (Sullivan and Rapport) fail to teach and suggest determining via the keyword(s) the native language of the user, using search form URLs to process the request and maintaining an offline database of vendors' site information used in processing the product keyword request. Verity (PTO-892, Item: U) discloses multilingual search and retrieval yet requires keyword translation. Verity alone or in combination with previously cited prior art fails to teach and suggest the claimed invention.

Neither the previously cited NPL prior art nor closest NPL prior art AltaVista alone or in combination with other prior art teach and suggest the combinations of methods as claimed.

### ***Conclusion***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
